My root partition went corrupt so I formatted and installed Ubuntu on a LiveUSB so that I could use GParted to recover my system. Unfortunately, when I booted from the LiveUSB I realized that the computer was being controlled by a default user (in addition to root user), which I believe should be disabled by default. It looked like a LiveUSB session (which I created with the same Ubuntu distro). The computer only has an option to be used as a LiveUSB. When I booted from the LiveUSB my system seemed to have rebooted several times and I was greeted by a message on my laptop screen saying: Ubuntu 14.04.1 LTS I could not recover my system even with GParted. What is the best way to recover my system (aside from buying a new laptop)? A: How can I recover my system from a live USB It is not "recovering your system" when you use a live media to troubleshoot the problem. You already boot from a live media. That's what you need to use. Reinstallation of a corrupted system Ubuntu live cd is enough, you don't need an Ubuntu DVD. You need to use Boot Repair. Boot into your Ubuntu live media. Run Boot Repair. Follow the instructions. The picture below explains it very well 2d92ce491b
