Herbert Schildt: Swing A Beginner's Guide 2006/02/22 · Swing is a popular GUI framework in Java. In this tutorial, I will explain the basics of Swing and how it works.

You will learn about the components of a Swing. Show HN: FarmBox – Drop in the Mailboxes to Roommates and Neighbors - edkennedy ===== edkennedy Some context:

We launched in February, and have sent over 30,000 personal boxes to friends and family. However, in the past few months we've gained some traction and have been

---

grateful for a few key things we could have done better in the beginning: 1\ Launched on a Wednesday. We launched on a Wednesday (2/7) to get initial placement in front of the public and start getting orders. We posted some images, and within a few days got about 500 boxes ordered and received in 1-2 days. As a result, we were able to get a ton of work done within a few days and shipped boxes to all of our initial customers. 2\ Launching a DIY, one-click-and-done service. The main thing that we felt would prevent many people from ordering was that there was no easy, out-of-the-box way to do it. We were a little underwhelmed when we saw that there were few one-click services in the market, and we spent a few weeks coming up with something better. We now have a ton of DIY features (we currently have about 15 easy one-click features for more advanced DIY). 3\ Incentives for people to order. We thought we would have a ton of customers. However, in our second launch, we actually had fewer than 5 orders. We heard about this and started getting really bummed. We still had some non-customers, but they seemed to be getting less and less after our second launch. We then started adding incentives: free shipping (on orders of \$75+) and a membership that gives 5% off. We've started increasing shipping charges and it seems to be working a lot better. Feedback welcome.

Thanks! Q: Como utilizar as funções do \renewcommand? Estou com u
