If you would like more info on AutoCAD Electrical please see the AutoCAD Electrical site. Sometimes, people may need to share files among different users. This can be a headache, because the files need to be shared with the correct ownership or permissions. AutoCAD users can work together with Windows users with the Windows Share Folders feature. AutoCAD users need to install the AutoCAD/Windows Share Folders 1.0.msi to create a share folder on their computer. When opening a file with a share folder, the file can be shared to a network location and opened by others. This can be done within the same file or in an external file. There is also an option to share the file with all users. Windows users can then open and use the share folder. Windows users must also install the AutoCAD/Windows Share Folders 2.0.msi to use a share folder with AutoCAD. Autodesk Revit does not install share folders by default, and this needs to be installed separately. Follow these instructions to install share folders for Autodesk Revit: In the Revit interface: In the ribbon go to File>>Create>>Share... Click the drop down menu to select Network share folder. Click the Browse button to locate and select the share folder. Click the Install button and wait for the folder to be installed. Click the File drop down menu and select Open Click the Share Folder option to access the network share folder. The Revit Projects tab allows users to access and modify project files using the team software features. Team members must use the same server to access and modify the same project files. Team members can use the Team Features option on the Open Document dialog box to access and modify project files. After a project file is open, users can share it with everyone else using the AutoCAD/Windows Share Folders 1.0.msi. Team members can create and modify drawings and sections, insert drawing components and components, insert layers, edit models and place images. Team members must be registered on the same server and have the same project file open. Team members must have the same permission levels when working with project files to be able to modify the files. Team members can share their own project files to the project server. The team members will be able to open and modify project files
