GT Works3 was introduced in Japan to update the design tools of the GOT Series of HMI. The HMI is a type of a line drawing part which consists of a series of custom screen menus used to operate a graphical user interface (GUI) and to read and control various systems of an engine room and a body. The HMI provides the function of normal operation of mechanical controllers and emergency control to the operator. It provides the function of representation of operation controls or data on the display of a display device. The HMI is controlled by a control panel and connected to various equipment by an HMI Controller via signals of RS485/RS422. The HMI realizes the following functions: (1) the operation of mechanical controllers, (2) the display of data on the display device, (3) the communication of HMI with an engine computer, (4) the display of operation instructions on the display device, and (5) the communication of HMI with a DSP. The HMI of the GOT Series includes the following functions. The GOT Series differs from the GT Series. The GOT Series is classified as a GU type of HMI while the GT Series is classified as a FG type of HMI. The GOT Series has the programming. GT Designer 3 free download.
