Gelb's The Heat Is On, How the
World's Scientists are Losing the War
Against Creationism, explores
creationism's infiltration into the
scientific community and the

resistance by a growing number of scientists. It documents the attack on science in many countries including the U.S. The book examines how creationists, in general, and those opposed to the theory of evolution, in particular, use the media, or academia, to spread false information about evolution. Gelbspan tells how evolution deniers are successful in convincing the public that the latest scientific findings on evolution are wrong. Gelbspan also discusses the way the scientific community has responded to these tactics. Get breaking news alerts and special

Rapidly add 3D objects to your drawings. Add 3D shapes directly from ArcGIS Online or ArcGIS Online Explorer. Or use a 3D template to quickly create objects with preset sizes, features and styles. (video: 2:16 min.) Layer management and collaboration: Organize and collaborate on shared layers in the Layer Manager. Easily select, delete, and move layers within a drawing. (video: 2:55 min.) File import and

management: Import files directly into AutoCAD. Import layers and map files from ArcGIS Online, ArcGIS Pro, ArcGIS Explorer, or your computer. Import tools, annotations, and map layers. Share drawings and layers with colleagues and clients. (video: 2:30 min.) Freeform dimensions and cuts: Use freeform dimensions to quickly annotate blocks and sections and easily set predefined cuts. Freeform dimensions can be constrained by external objects, so you don't have to manually draw the cuts. (video: 2:50 min.) Multiple supports: Align multiple supports within a drawing.
