I want to print this: \$ echo "abc\$def\$ghi\$jkl" abc\$def\$ghi\$jkl But the output is: abc\$def\$ghi\$jkl \$def\$ghi\$jkl Is there a way to print all the variables at once? A: This happens because, in your case, \$def\$ghi\$jkl does not exist as a shell variable. The shell will convert this to the string "\$def\$ghi\$jkl" prior to executing the command. You can confirm this with this shell script: #!/bin/bash # This script will show how \$abc\$def\$ghi\$jkl and \$def\$ghi\$jkl are converted to # "\$def" \$ghi"\$jkl" before executing the command. # The below commented part will be removed when this script is run with # the -c flag, and will show the original string "\$abc\$def\$ghi\$jkl". echo "\$
