HTML Compressor Crack Keygen Full Version Free Download [Latest 2022]

Compress a HTML document into HTML & Images files. The program can be run with three modes: – Compress the whole HTML document – Compress the body part of the HTML document – Compress the images in the document HTML compressor is easy to use, fast and the compressed files are not damaged. In case of system errors, the program stops automatically and you can easily restore the original file. To date, the program has been tested on Windows 98 and Windows NT 4.0. The only requirement for running the program is Internet Explorer 4.0 or higher and the compression is working in all browsers, including Firefox, Safari and Opera. You can compress a single page, all the pages in a folder, or files/folders individually. It makes compression work for more than one HTML files using batch compression. A compact unzip file (zip or zip64) that does not contain a help file – Thorough information on the maximum number of files to compress, you can also set it as a percentage of the total, and the maximum compression level (compression ratio) that can be used. – An informational

summary of the file before compression, a directory structure with all the files included, and a complete list of files included. – Automatically select a compression level between 1 and 9 (1, 2, 3, 4, 5, 6, 7, 8 and 9) with an input text field, you can also select one of the already saved compression levels. – No other windows open while running the program, the program remains visible during the compression time. The compressed files are stored in a folder with a name that you select. All you have to do is choose the files/folders to compress and click the Compress button. The program will compress your files according to the parameters you've selected. If you have any questions, just enter them into the empty boxes below the Compress button, and click the Compress button to run the compression. The compressed files can be run or saved in archive format (zip and zip64) – A compact unzip file (zip or zip64) that does not contain a help file – Thorough information on the maximum number of files to compress, you can also set it as a percentage of the total, and the maximum compression level (compression ratio) that can be used. – An informational summary of the file before compression, a directory structure with all 09e8f5149f

HTML Compressor Free [Mac/Win]

HTML Compressor is a user-friendly HTML compressor that includes a password protection and allows you to change the default charset of your web pages. You can select the compression algorithm between zip compression and a more complex html compression. You may secure the connection with a password, make backups or choose to preserve the metatags. Features: - Import and export files - Import from all formats like Zip, TAR, RAR, BZ, GZ, ISO, JAR, HZ, UNZ, ARJ - The compression can be done on the fly - Compression of all the HTML tags - Support for the standards of the "HTML Purifier" - Change the default charset (windows-1251, iso-8859-1, cp437, euc-kr, etc.) - Support for secure data exchange - Support for "ssl" - Wizard to configure security and password - Wizard to backup your HTML files in Zip, RAR, HZ, BZ formats - Manage your file permissions - Executing on files or folders (a backup of this files is saved on the same folder - Format for the output of the compressed HTML: HTML, TXT, Plain Text, or RTF - Output in FTP, HTTP, HTTPS, IMAP, POP, SMTP, SFTP, TELNET and SSH - Additional options to select compression / Html password /... - Backup the connection - Compress on the fly - A standard and easy-to-use interface Notes: - "Compress on the fly" option is available only if you save the files on the same computer. - You need to set the compression options before saving the file (all the other options are optional). - "Compress on the fly" option is not available when you use the FTP protocol. - Compress on the fly is not supported when you use FTP over SSL connection - Compression of all the HTML tags is not supported by all compression methods. - The selected charset must be available on the computer where you want to save the file. - The saved file is a valid HTML file. You can edit or modify it as you want without losing its original format. - Backups are saved in the same directory where the file was initially saved. - Exported files are generated from the original file. If you want to compress only a part of the file
