DREAMIN' 7. BABY ACTION 8. HONKY TONK KURIU ~HOŌHONKUMI~

Category: Japanese rock music groups Category: Musical groups from Tokyo The present invention relates to a memory system and a management method thereof, and, more particularly, to a memory system having a plurality of memory devices which are configured to have the data stored therein asynchronously updated and a management method thereof. In recent years, information devices such as computers have a plurality of memory devices. The information devices use the memory devices for, for example, storing data, and storing the data in the memory devices in the operation of the information devices. In addition, recently, a system has been widely used in which a plurality of information devices share one or a plurality of memory devices for the purpose of expanding a storage capacity or improving the performance of a memory system. In the memory system having the plurality of memory devices, the memory devices are configured to have the data stored therein asynchronously updated. In this case, the memory devices are configured so as to have the data stored therein asynchronously updated, and update the data stored in the respective memory devices. Therefore, even if an access request is received from the memory system, an access may be performed between the memory devices while the data stored in each memory device is asynchronously updated. Accordingly, in the memory system having a plurality of memory devices, a method has been conventionally suggested which manages an access timing so as to prevent an access conflict between the memory devices. In general, the memory devices are connected to each other through a bus, and are controlled by a memory controller. Further, a 54b84cb42d
