What's New in the?

Asoftech Data Recovery for Mac is designed to scan your entire hard drive and locate any files or folders that are missing.

If you have accidentally deleted a file from your Mac or want to retrieve an important document that has been deleted, you need this software. It scans the entire drive including all partitions, and it will find any hard drive or disk that has been formatted or corrupted. It will allow you to choose what file types you want to recover. This software is able to scan corrupted and crashed partitions as well as data blocks that have been damaged. It can also recover deleted files that have been emptied from your Mac using the Apple's Disk Utility. Using the File Rescue technology it is able to recover missing or damaged files and folders that are stored on Mac's hard drive. With its File Browser Viewer, you can browse through the entire partition in a tree-view and locate deleted files. Its built-in File

Profiler will help you to locate the folders and files that have been deleted. This is a powerful tool that will help you to restore data from external hard drives. What's New in Version 4.0: --Added the ability to select individual folders to be scanned. --Added new Mac OSX Lion support. --Added the ability to view and save preview pictures from RAW and MP3 files. --Bug fixes. --Added a new dashboard. --Added the ability to disable individual checkboxes. --Added the ability to prevent the system from automatically writing to the volumes. --Added the ability to browse the entire hard drive, partitions and folders. --Added the ability to print the recovered files. --Added the ability to hide the "Unknown file" and "Repair Disk Permissions" labels in the scan results. --Added the ability to remove the

"Paranoid" Scan type. --Added the ability to create a USB Flash Disk. --Added the ability to define a custom destination for the recovered files. --Added the ability to filter recovered files based on file type. --Added the ability to search for a specific character and word in the found files. --Added the ability to restore the preview pictures from RAW and MP3 files. --Added the ability to use file names or thumbnails to browse the found files. --Added the ability to scan any drive including UNIX/Linux and Windows partitions. --Added the ability to send the found files to the terminal window. --Added the ability to cancel a scan. --Added the ability to sort files based on date and time. --Added the ability to export the recovered files to disk image. --Added the ability to control the maximum space of the

recovered files. --Added the ability to scan every hard drive. --Added the ability to restore hidden files. --Added the ability to save the recovered files to other drives. --Added
