Currently, the AutoCAD ecosystem includes a desktop program, mobile apps, and a cloud platform to deliver engineering-centric functionalities on top of various 3D modelling and drawing applications. Design tools AutoCAD, and its predecessors, is an AutoCAD suite of engineering applications. It provides comprehensive design tools for 2D and 3D drafting and modelling. In addition to 2D and 3D, AutoCAD also provides an environment for the creation and modification of 2D PDF files, animations and videos. 2D drawing The 2D drawing tool of AutoCAD provides the ability to draw, edit and place 2D shapes. The good news? The changes only affect your NAS and not your iPhone. It's safe to say you don't want to be moving the files to your NAS if you're running any type of phone operating system. But there are some very important changes in iOS 9.1.1 that are specifically targeted at network-attached storage users. If your NAS is running the ReadyNAS and has been upgraded to Synology Update Manager (SUM) version 3, it's time to move to iOS 9.1.1. I recently upgraded to iOS 9.1.1 myself. I had the update installed for a few days and then it was replaced with the iPhone OS 10.2.1 update. A New Remote Connection to the NAS This is what happened in my case: Synology Update Manager released an update for SUM version 3 that included a fix for the issue that prevented NAS users from connecting to NAS using iPhone on iOS 9.1.1. I didn't realize that there was an update to SUM and only checked a few of my Synology apps. As I'm not a frequent iPhone user, I didn't do anything special. The updated SUM just installed and everything was running fine. After a few days, the latest version of SUM 3 came out and replaced the one I had installed. The issue was that SUM 3 didn't recognize the security key I had saved in the Synology password manager. That password is required to connect to my NAS using my iPhone. In the previous version of SUM, there was a drop-down list that showed which devices the saved passwords 5b5f913d15

For more info: The utility of field emitters (hereinafter “field emitters” or “FED”) in forming a display is known in the art. In general, such displays are formed by providing a number of FEDs that are separately addressable. These individually addressable FEDs are then provided for display of images, where each FED is selected to emit light. FEDs are usually designed to emit light at a relatively low frequency, such as about 5 KHz. Typically, the use of FEDs in forming a display is limited to low frequency operation due to the high power and efficiency requirements of such a display. Typically
