Version 1.4 \*Fixed the problem with the screen flickering on some monitors when the screensaver is active \*Added a new screensaver control panel where you can set several user defined screen saver options.Q: What's the point of using the "&" operator in Swift? In my Swift code, I ran into a situation where the optional binding & operator doesn't seem to be working the way I expect it to. let a: Int? = nil let b: Int = 1 a = b & 3 println(a) // it prints nil In the above example, if I unwrap the optional, it prints 3 (as expected). The & operator works fine in other places in the code. What am I doing wrong here? A: The short answer is that you're not doing anything wrong. The & operator is a bitwise AND, which results in 0 if either operand is nil or zero. In your case, you've chosen to assign nil to the variable a, so the bitwise AND operation will return nil. The long answer is that you're very confusing the bitwise AND operation with the logical AND operation. The & operator is used for bitwise operations. If you want to do a logical AND operation in Swift, you can use the && operator. A bitwise AND is equivalent to the logical AND, but it does not propagate the value up the optional chain. That's what's confusing you. If a is nil and b is 1, the & operator

◆s scores more so than average, the principal of the school where he is doing it, and the other students in his grades and classes. Smarter people believe those who disagree with them are idiots. A smarter person knows those who disagree with them are smarter than them. [BTW: That's why there are so few "ad hominem" attacks here. I'm guessing you're smarter than I am. If not, you should consider carefully whether you would be comfortable being challenged in that way.] Bren – there is also a mental limitation that has always made me less than comfortable in debate. I am limited in thinking time, so I can not deal with a debate at the high level that you and some others seem to be accustomed to. "Can you imagine living in a world where people were smarter than you? It would be the end of civilization as we know it." In all seriousness, that's kind of a funny statement. Why would you conclude from that that intelligent people would be "the end of civilization as we know it"? What would civilization mean without the ability to lead a productive existence? What would it mean without the ability to acquire the skills and tools required to lead that productive existence? If the biggest cost of all education is wasted effort, then people with less ability to learn might be the ones who would suffer most. What I don't like about the thrust of this post is the assumption that the marginal value of better education goes down as the marginal cost of education goes up. Why would you conclude from that that intelligent people would be "the end of civilization as we know it"? That's the nature of an argument between people who think they're smart. It's a logical fallacy to conclude that what makes you smart would make others less intelligent. That's the nature of an argument between people
