DiskCat Crack

Keep your important files organized, so you will never lose them. Make a catalog from all the data on your CDs, DVDs, directories or drives and you'll be able to find them easily. DiskCat is a robust utility that can help you organize your data by cataloging your CD/DVD, directories, removable drives, and your hard disk. Once you have created the catalog, you can search for information using filters, and export it to a TXT file. DiskCat has been tested with Windows 7, XP and Vista operating systems. Great Features: - Easy to use - Search across all catalogs - Supports filtering - Export to TXT file - Compatible with Windows 7, XP, and Vista - Multiple languages. All the files in a catalog can be searched using the software's "Filters" tool. To use it you'll first have to create a new catalog. Let's say you have a catalog from your CD or a removable drive. First, you need to create a new catalog. Just follow the instructions. By default, the software will generate a name for your new catalog in the format of the source folder. You can always rename it. Just select the 'Edit' option and type in the desired name for your new catalog. In order to use "Filters" tool, you must select a category from the bottom tool bar: - Generic (All-Inclusive) - All the files in your selected catalog will be visible in the menu when you select this option. - On-Disc - This option will display only the files from the selected catalog which are on your CD/DVD. - On-Removable - This option will display only the files from the selected catalog which are on your removable drive. - Off-Disc - This option will display only the files from the selected catalog which are not on your CD/DVD. The "Search" option is located in the top menu. It enables you to search across all catalogs. This is the most powerful tool because you can search any file by specifying its name. To use it, enter your keyword in the text box below and press the "Search" button. The software will return the list of files which match your criteria. You can choose to only show the files which have certain tags (include the "Visual Basic" tag for example). In the next step you can filter the

What's New In DiskCat?

DiskCat is a utility that creates catalogs from your computer's local storage and optical drives. It can organize your CDs, DVDs, folders and directories into an elaborate collection of databases for easy searching. The catalogs are divided into categories and contain any number of subcategories and files. Key Features: - Organize your CDs, DVDs, local folders and other files into databases using a folder as the root. - Each database can be opened or closed at any time, enabling you to focus on only one or several. - Search catalogs by using a keyword or a search for specific files. - Filter catalogs by removing any file whose name contains the specified text string. - Automatically generate searchable catalogs by converting your files to zero-bytes. - Export the contents of a database to a text file. - Create, organize, search and export databases. - An information panel on the application interface. - Support for 32-bit and 64-bit systems. - Documentation available in the Help section. Minimalistic, yet intuitive GUI The design of this application is meant to be as straightforward as it gets, thus making it possible even for beginners to create catalogs and organize them in databases. You only need to select the folder you are interested in, no matter if it is stored on an optical drive, a removable device or your HDD. The resulting catalog retains the name of the source directory, but you can modify it later on. Create searchable catalogs Next, DiskCat automatically generates a catalog by creating zero-bytes files corresponding to the real documents, while preserving the original structure. Once this step is completed, you can effortlessly search these catalogs by specifying a keyword and all the files matching this criterion are displayed. When using the 'Filter' function, you get to narrow down the list by removing any files whose filename includes the specified text string. It needs to be mentioned that initiating a new search analyzes all available catalogs and databases, yet you can right click the result list and set it to show only the data from a certain catalog. Export data to TXT files Due to DiskCat, you can export the contents of a chosen database to a file (only TXT is supported), thus making it possible for you to get a clear overview of the total number of catalogs you store in each database. It also includes the creation date and time, along with the catalog names. Additionally, you can view a text version of a catalog by accessing the context menu from the result list. All in all, DiskCat might take some time getting used to, yet its detailed documentation can help you make the most of its functions within minutes. Description: DiskCat is a utility that creates catalogs from your computer's local storage and optical drives. It can organize your CDs, DVDs, folders
