What is AutoCAD? AutoCAD is a professional-grade drafting application designed to be used by architects, engineers, and construction professionals. The software is primarily used for 2D drafting, which involves the creation, modification, viewing, and rendering of architectural and engineering drawings. The term AutoCAD is short for Auto Computer-Aided Design. AutoCAD is used to make industrial machines, electronic products, and cars. AutoCAD is a registered trademark of Autodesk. The Linear and Grids facilities in AutoCAD, combined with its structured text facility, enable creation of authoring packages that can be managed as any other drawing. I need to get a reference to the second view controller from the AppDelegate to be able to make a segue to it. How do I do that? I have looked at a few similar questions and they were all a little bit different. I have made it this far:

var mainStoryboard = UIStoryboard(name: "Main", bundle: nil) var initialViewController:UIViewController? var secondViewController:SecondViewController? override func viewDidLoad() { super.viewDidLoad() initialViewController = mainStoryboard.instantiateViewControllerWithIdentifier("InitialViewController") as UIViewController secondViewController = mainStoryboard.instantiateViewControllerWithIdentifier("SecondViewController") as SecondViewController } A: You don't need to use any of the code you've written. Make sure you have the following properties in the app delegate (UIApplicationDelegate) var navigationController:UINavigationController? var secondViewController:SecondViewController? Then, in the viewDidLoad method of the view controller that is the first in the hierarchy, navigate to the view controller you want to load by using the presentedViewController property of the navigation controller: navigationController?.presentViewController(secondViewController, animated: true, completion: nil) This will let the navigation controller know where to start the navigation when the view is presented. Poor visual outcomes after endovascular treatment of patients with idiopathic intracranial hypertension. To assess postprocedural visual outcomes after transvenous cerebrospinal fluid diversion in patients with idiopathic intracranial hypertension (IIH). From 2006 to 2016, 26 patients with IIH were treated with lumboperitoneal (L-P) shunt. Mean age at the time of shunt surgery was 39.2 years (range, 18-60). The mean follow-up time was 51.7 months (range, 13-109). Two patients were excluded from the study because they underwent revision surgeries. Mean final intracranial pressure was 16.5 mm Hg (range, 10-27). Visual outcomes were determined using Snellen and logarithm of the minimum angle of resolution (logMAR) charts. The assessment of visual acuity was repeated 1 month after L-P shunt implantation. Final visual acuity was significantly better in the L-P shunt group than in the non-L-P shunt group (p Customer Service We love doing business with our customers, we invite you to contact us anytime you have a question or need help with anything at all.
