Hydra Browser is a lightweight browser based on Internet Explorer's engine, Trident. It comes with support for RSS reader, YouTube downloader, bookmarks, security settings, auto-form options, translator and several FTP utilities. User interface The tool integrates a ribbon-like interface with a tabbed menu and several sidebars with history, bookmarks and RSS

feeds. Unfortunately, the mix between the aforementioned implementations is not a successful one, as the layout looks crowded and not particularly intuitive. The Back and Forward buttons, which are the most used ones when navigating on the Internet, can only be found in the Home menu, so if you want to access the Edit, Favorites & Sidebars, Security & Settings, Tools and RSS, they disappear. Good news is that you can work

in a multi-tabbed environment and automatically refresh a page at a user-defined time (in seconds). Bookmark manager, YouTube downloader and other handy features Hydra features a powerful bookmark manager where you can keep track of all your favorite URLs and save them in a user-defined category and group. What's more, you can download videos from YouTube and save them on your computer for offline viewing, work with a

set of JavaScript functions, activate a simple mode for hiding the advanced features, and go fast forward/backward. Other useful features worth being mentioned enable you to collect parts of webpages using the copy/paste method and merge the information into a single page, import IE favorites, work with a calendar, to-do list, unit convertor, and RSS feed reader, and access various preset webpages that are organized in

different categories, such as News, Finance, Games, Lifestyle and Technology. Security and general settings Hydra gives you the possibility to block ads and popups, enable the anti-phishing mode, clear history, typed URLs, cookies, temporary files and cache on exit, use auto-fill forms and auto-logins, and disable ActiveX, Java and frames. You can install extensions, make use of mouse gestures for performing several actions (e.g. go back or

forward, exit the application), block background sounds, images and videos, remove IE navigation sounds, and set Hydra as your default web browser. Bottom line All in all, Hydra comes with a handy suite of features for helping you navigate in a secure environment. On the downside, the layout looks crowded and the web browser needs a major facelift for

High quality macro recorder that allows recording most basic keystrokes and mouse activities into editable text files.

KEYMACRO has all the features of a typical macro recording program and even more. For example, it's the only recording software that also allows the insertion of images into the recorded text. It also includes a drag and drop command line interface for creating complex scripts, which makes it even more

powerful. A better solution than the typical macro recording program, KEYMACRO comes with multiple timers, a sequencer, a pop-up timer, image and text editors, an option to change screen color, and a lot of other useful features. Drag and drop command line interface Key macro recorder Easy time recording Image and text editors Screen color changer Macro recorder time set Macro recorder pop-up Installation and usage

KEYMACRO is compatible with Windows 98, NT, 2000, XP, Vista, 7 and 8. Besides, it can run as an independent application or an Outlook plug-in. To run the software as an independent application, open the installer, double-click the executable file and choose “Continue to Installation”. In the next window, read the license agreement and click on the Agree button. After the installation, you will find the program icon inside of the Start

Menu. To use it as an Outlook plug-in, start the program, double-click the icon in the Start Menu and choose the option “Add to Outlook”. Then, follow the wizard to activate the plug-in. Time and undo/redo Keyboard and mouse activities are recorded into editable text files according to time, date and the location of the file. Moreover, you can record keyboard and mouse actions independently, which makes it easy to create macros in

case you need a specific combination of actions. With the help of a timer, you can easily repeat keyboard and mouse actions at predefined times. Alternatively, you can specify your own time using the “Set Time” option in the main menu. However, you can also create sequences of actions by using the sequencer. Finally, you can easily edit the recorded text at any time. For example, you can insert image or text into the recorded

text, edit dates, time, time intervals, and add comments. Keyboard shortcuts The only drawback of KEYMACRO is that there are no keyboard shortcuts available in the 77a5ca646e

What's New in the Hydra Browser?

- Provides support for RSS feeds.
- Allows you to download YouTube videos, and it can be used with the bookmark manager to keep track of your favorite Web sites.
- You can use this program to quickly access web pages that you previously visited.
- This Internet Explorer 6-based browser comes with several

useful tools, such as History & Favorites, Tools & Internet Options, and Security & Internet Options. • You can configure the program by allowing it to automatically log you in when you log on to the Internet. • You can also use it to manage passwords and auto-fill forms. • This browser also comes with an Internet Explorer 6-based quick search tool that is useful for quickly accessing various information and folders. • You

can access various preset pages for fast navigation, such as a Security page for managing your security settings, News page for keeping up-to-date with news and events, etc. • You can import and export your IE Favorites. • You can also use this Internet Explorer-based tool to perform searches for popular video sharing sites. Hydra is a web browser-based application for Windows. This powerful tool is based on Internet Explorer's engine, Trident. With

the help of this product, you can work with RSS reader, YouTube downloader, bookmarks, security settings, auto-form options, translator and several FTP utilities. User interface Hydra integrates a ribbon-like interface with a tabbed menu and several sidebars with history, bookmarks and RSS feeds. Unfortunately, the mix between the aforementioned implementations is not a successful one, as the layout looks crowded and not

particularly intuitive.
