I am writing a simple program to monitor a webpage. I decided to use wampp. I noticed that even though i placed the html files in the main folder of the wampp directory, the wampp server still tries to extract the html files from the other folders. Is there a way to configure wampp to automatically extract the html files from the main directory? A: I think the answer is "yes". Load the page with a curl command. If you get it right, you'll see your files in the main directory. Make sure you use the server's internal curl (should be available through apache bin path). Prometheus Litecoin Prometheus Litecoin is a blockchain based network that was first conceptualized by cryptography expert Erik Voorhees. The platform has two new types of coins, namely, LTC coin and the GRC coin. The team behind the project claims that the project has the capability to solve one of the major problems facing the cryptocurrency industry today. This is the problem of coin centralization. The team behind the project explains their vision on how their platform will solve the problem of coin centralization. They say that the Litecoin has its own 'master node' which acts as a point of convergence in the network. The node assigns rewards for validating transactions. The reward will be sent to the holder of a dedicated 'sub-chain' of the node. According to the project's vision, the rewards from the sub-chain acts as an incentive for the maintenance of the network. The network is responsible for managing the peer-to-peer transactions by recognizing the 'validity' of transactions. The block generation is done in an independent manner from the block validation. Block generation is done in a way that is independent from the network itself. 82138339de
