System Mechanic is a system optimization and
protection software which eliminates irritating
files, broken registry entries, leftover
processes, orphaned files and other memory
leaks. The interface of the software is plain
and simple, so navigating within it is easy.
System Mechanic can clean up your computer,
reset the Windows password, ensure security
and privacy, boost system performance and
eliminate unneeded applications. The program
also offers built-in tools to fix errors and
optimize system settings, so you can easily and
quickly solve Windows errors. System

Mechanic's cleaning process is extremely quick, which is why it's a good choice for a portable solution. Yet System Mechanic comes with several disadvantages. The program cannot automatically detect and clean up invalid registry entries, as well as files left on the Desktop, search index entries and temporary Internet files. Also, you cannot clear selected items from the start menu and the recent items list. System Mechanic comes with the following features: Deletes temporary files Deletes temporary Internet files Deletes system preferences Deletes unwanted Windows programs Fixes registry entries Deletes orphaned files Disables programs run automatically when the computer starts Deletes unneeded Internet shortcuts Resets the Windows password Adjusts the system settings Autom

* Works in real-time and automatically. *

Allows you to control programs, as well as gain access to some system functions. *

Does not require administrator rights. *

Cleaning tasks can be completed in one of two ways: by selecting specific folders and files to clean or by specifying a list of rules. *

Compatible with any version of Windows. *

Provides automated and easy-to-use scanning. *

Does not require third party tools. *

Allows you to view the items that will be cleaned and delete them if desired. *

Available in seven languages: English, French, German, Italian, Russian, Spanish and Turkish. *

Allows you to access the online help file. *

Requires a minimum amount of system resources. AstraCleaner is a user-friendly program which was developed to get rid of junk files, temporary system files

and Internet cache. As the first thing you should do when installing the software is to specify its location, select the cleanup mode and proceed with a few clicks. Afterwards, you can select specific items and adjust the number of items per category. The program automatically sends all found files to the Recycle Bin. However, it is not possible to select specific items and delete them. Nevertheless, you can specify a specific amount of free disk space which will be used to remove the items. You can also specify the amount of RAM which will be allocated to the cleaning process. When the cleaning tasks are done, the system won't slow down anymore and you can view a list of files that were successfully deleted. All in all, if you are looking for an efficient program which doesn't require third party tools and provides a friendly user-interface, AstraCleaner might be

a good choice. AstraCleaner does not require an installation, so it can be quickly launched from a USB stick or an external hard disk. On the other hand, the software contains many system requirements which must be fulfilled before installing it. This is a Windows, Mac, Linux and Android app. The app is a free download and contains no trials or limitations. The app is free to download and open and does not require the payment of any kind. The interface is simple and easy to use. It is a program that is often used. Clean & Simple Cleaner Plus is a disk defragmenting tool which can improve the performance of your system and increase the speed of its tasks. You can [1d6a3396d6](#)

Complete System Tuneup is a standalone application designed to help you clean up your computer in order to improve its performance. The interface of the application is plain and simple, so navigating within Complete System Tuneup is easy. You can enable or disable applications which automatically run at system startup, as well as scan and remove invalid items found in the start menu. In addition, you can clean up your hard drive when it comes to temporary system and Internet files, Internet history and cookies, Windows registry MRU entries, error reporting files, the recent items list, thumbnail cache and Recycle Bin. But you can also configure advanced cleaning options when it comes to Microsoft Office, Adobe Flash Player and Quicktime Player tracks,

Widnows old prefetch and junk files, along with empty user folders. Last but not least, you can access several Windows utilities, including Disk Cleanup and Defragmenter, Action Center, Event Viewer, Power Options, Backup and Restore, System Properties, Task Scheduler, Registry Editor, Computer Management, Command Prompt and Internet Options. The program takes up a moderate amount of system resources and quickly finishes a scanning job without popping up any errors. On the other hand, "Start Menu Cleaner" doesn't let you select files to delete (it automatically sends all of them to Recycle Bin) and you cannot view specific issues detected by "System Cleaner". Also, half of the program's functionality relies on Windows tools. Plus, the software popped up an error and crashed when we tried accessing the help file. All in all, Complete System Tuneup is a

good program for cleaning up unnecessary files and folders, but it needs bigger and better features before including the word "complete" in its title. The software has a classic and friendly interface, and comes with a well-designed help file. After installing the program, you can launch the Cleaner.exe program directly from the start menu. As its name implies, the application enables you to clean up several categories of items found on your computer. For example, you can remove unnecessary files, empty temporary items, junk files, history items, cache files, entries from the recent items list, junk shortcuts, cookies, unused plug-ins and invalid items such as temporary Internet files, history, bookmarks, closed documents, previews, history, download files and more. To begin the process, you need to select a category of items to clean (for example, you can choose items

from the 'Recent

What's New In?
