Keymacro is a utility that will allow you to create macros using your keyboard's built in function keys. More specifically, it will allow you to configure shortcuts for many commonly used functions. This application is written using the QuickMacro application from JavaWorld. Keymacro has a modern and slick user interface. It is very easy to configure macros and to update and save the ones you have created in the past. Keymacro also allows you to create shortcuts for many Java functions. Keymacro can be used with Windows, Mac OS and Linux. If you have a Java application or a plugin for Eclipse IDE that you would like to have Keymacro configured to use, you can get it here. JAR File Size: 15.61MB SCREENSHOT: New in v1.0.2: Adds alternative process for compilation and deploy process As a long-time Eclipse user, I was excited to see this app in the repository Keymacro requires a 64 bit version of Windows to function, which is where the main annoyance comes in for me as an end-user. While the installation process is fairly straightforward, the "compile and deploy" process for Keymacro can be a bit cumbersome. Since the manual process is a bit out-of-date, I wrote a very simple app that can automate that process for you. If you have a Java application that you would like to be ready to deploy the next time you hit a power-button, you can download the pre-built app here.
