Q: Odoo 9 - loop through all queries with sales order or inventory I want to iterate through all queries of sales order or inventory model with all fields that are used. I tried this but something seems missing in the loop and I am not sure if the retrieved records are of type: sale.order or sale.inventory for field in self: print(field)

TypeError:'sale.order' object has no attribute 'get_fields' A: The self is a model name and in your model it is not a sale.order so the for loop will not work. You need to know the type of self and iterate as follows:

```
Inventory.search_default(limit=15).browse(cr, uid, company_id, context=context).get_all(cr, uid, fields=['name'], context=context).select(cr, uid, list(fields)[0])
Sale.search_default(limit=15).browse(cr, uid, company_id, context=context).get_all(cr, uid, fields=['name'], context=context).select(cr, uid, list(fields)[0])
```

That way you have access to the fields of an inventory or a sales order in the same for loop. 0.034 0.967 0.962 NLR 0.915 0.977 0.989

Backup and Shutdown is an efficient and reliable backup utility app. It can manage all information you store on your computer, such as contacts, documents, multimedia, Internet favorites, or even applications, one by one. Who hasn't wished for proper protection and recovery while working on a computer? Back up is the best way to stay safe, and it's not something many people do. Luckily, there is a program to help you out called Backup and Shutdown, an excellent application that's designed to create automatic backups of important info, and even enable you to get it all done while the computer's on! Flexible backups Backup and Shutdown makes backups simple and easy. Once installed, all backups run from a backup program stored on the HDD. You can select which files you want to back up, and even set up new custom locations for protection, with regular schedules set so they can be scheduled to run at a certain time each day or week. In addition, you can select action(s) to perform on a backup, such as shutdown, reboot, stop, log off, etc. On the other hand, you can also customize when the backup should run, as well as change what program is used to create it. Rigorous backup options In addition to creating backup plans, you can set which options to apply to the backup process. Manual settings include the location to back up files, and even the custom backups you create to have their own custom settings. Other options include having a secure password with a user, a backup path, volume, as well as an archive file type, all of which make it easy for you to set up what you want to protect in the first place. Automated backups Backup and Shutdown is not only a good backup tool, but it can also be automated to take care of backups for you. Once you have the application installed, you can do a startup wizard to configure what is required to be done with backups. In conclusion, Backup and Shutdown is a great backup utility program that makes it easy to take proper backups and set up schedules. The program offers a lot of options, and it's a helpful tool for anyone who enjoys being protected while working on a computer. What's New in the?

Keeping important documents, e-mails, and folders safe is simple with Backup and Shutdown. The application is a small, yet very powerful utility, and includes extras to ensure your files are at least once backed up and ready to go. SUMMARY: Linux/Unix: Back Up Windows users to take care of us Backup and Shutdown Description: Keeping important documents, e-mails, and folders safe is simple with Backup and Shutdown. The application is a small, yet very powerful utility, and includes extras to ensure your files are at least once backed up and ready to go. Easy creation of backup profiles Once the application is launched, a general info panel shows up to let you view recent program updates and changes, as well as what and how needs to be done. A tray icon is added and is the place where you trigger backup operations, and access the options menu. It's best to configure backup profiles first, especially since there aren't any preset plans to work with. Fortunately, the application makes it easy to create a backup plan. Experienced individuals can go ahead and fully configure all options of a profile in a tabbed window, which isn't really difficult to figure out. On the other hand, you can launch a wizard configurator which takes you through several steps, letting you manage the same set of configurations, but in a more organized approach. Secure backups and choose action to trigger You can choose to back up preset locations on your computer, such as the documents folder, as well as settings from Internet Explorer, Mozilla Firefox, Google Chrome, or Safari. Custom locations can also be added, and even the possibility to set up file filters to selectively create backups of content. The resulting backup comes in the form of an archive you can secure with a password. Logs can be sent via email, or have an alert system notify you when a backup operation hasn't been performed in a long time. Making the program run with Windows is a good idea, and helps manage recurrent backup sessions. An operation can be manually triggered through the tray icon, with options to backup and shutdown, restart, or log off, simple backup, custom backup, or even trigger computer power options. In conclusion Taking everything into consideration, we can state that Backup and Shutdown is a powerful, reliable application you can use to be sure that all important files and folders have an extra copy created, and even protected with a password. It's pretty easy to set up custom profiles, while
