The world of Application development has changed tremendously over the last decade. Where once you had to use one of the UNIX shell commands to build the application, now the use of scripting languages like Python and C++ can help achieve the same end. Furthermore, the cross-platform capabilities of scripting languages can make development easier than before. Once developed, the code can be run on any number of systems with little or no modification. The top tool to develop applications and games in the iPhone X was probably Sketch.
