Visual LISP Visual LISP is a programming language that may be embedded in an AutoCAD drawing. LISP is a dialect of Lisp, a programming language developed in 1958 by John McCarthy that can be used to program computers. LISP (common Lisp) is supported in AutoCAD 2000. AutoLISP is not part of AutoCAD, but is provided separately as an add-on. It may be used to automate CAD processes or to develop new ones. A graphic language exists to create and modify AutoLISP code for use in the graphical interfaces for the various AutoCAD functions. Visual LISP also allows the creation of macros. Macros are subroutines which can perform work on an object such as an area, closed curve, or closed line. Macros are defined using standard text editor tools, and can be saved and re-used with different parameters. Visual LISP can also be used for Autodesk products other than AutoCAD. For example, it can be used for the products such as Autodesk Forge, Autodesk BIM 360, Autodesk 360 Mobile, Autodesk Home, Autodesk HSM, Autodesk Project Server, Autodesk Mobile Apps and Revit BIM, and Autodesk Vault. Visual LISP can be created, stored, and run in the Visual LISP editor, a text editor similar to the Integrated Development Environment that is part of the AutoCAD programming tools. Visual LISP is included in AutoCAD LT. The purpose of this study was to investigate the effect of perceived support and the supporting network on psychological well-being and self-reported health of older women. The data are from a study of psychosocial risk factors among older adults, conducted in the Greater Vancouver area of British Columbia, Canada. In total, 382 older women, who were at least 75 years old, were recruited through random-digit dialing. One hundred eighty-four participants completed the study questionnaires in their homes. Participants reported the perceived amount and type of support they received from family and friends, as well as the support network of those who provided support. They also completed a health questionnaire. Results indicated that both perceived support and perceived support from family and friends as a network were significantly related to psychological well-being, even after controlling for sociodemographic characteristics and objective measures of well-being. Perceived support was also significantly related to self-reported health. The results of this study indicate that both perceived support from family and friends and perceived support as a network are important in predicting psychological well-being and self-reported health of older women.This list will have you running home with at least ten new movies coming to theaters in 2013.
