* You can transfer a photo to a canvas to add effects and change its style. (See Chapter 7 for details.) * You can crop a photo to get rid of parts you don't like. (See Chapter 5 for details.) * You can create new files for important photographic tasks. (See Chapter 4 for details.) * You can create a clipping mask to hide the content of one layer and display the content of another. (See Chapter 9 for details.) * You can make a background transparent so that you can see the content on the photo underneath it. (See Chapter 7 for details.) * You can save a selected area as a Photoshop file. (See Chapter 6 for details.) * You can transform images so that you can change perspective and change the size of an object. (See Chapter 8 for details.) * You can resize an image with different levels of success, depending on your skills and the quality of the original photo. (See Chapter 10 for details.) I discuss many of these subjects in more detail in the following sections. In this book, you'll find dozens of tutorials that show you how to use Photoshop. These tutorials usually show you how to accomplish a specific task, so you'll have to experiment and find out what works best for you. When you run out of things to learn, you're out of your computer and have to look for a new tutorial to learn. Understanding Elements You can find out a lot about Photoshop from looking at Figure 1-1. On the top-left side of the image you see the type tool, which allows you to change the style of type. The type tool is a fundamental tool in Photoshop. You can use it to type text, draw text, and change the type settings. **Figure 1-1:** The type tool in Photoshop enables you to change the type settings. The other tools shown in Figure 1-1 form a set of rulers. The top ruler shows pixel measurements, and the bottom ruler shows inches. The two rulers together show the size of the image. You can also see the settings in the Preferences dialog box shown in the figure. If you don't have the original Photoshop tutorial files, you can look for a similar tutorial for a related topic and follow along with the example text as you read the text, or you can simply do a Google search for tutorials on the topic you're interested in. Q: How to remove duplicate values in different levels of nested list? I have a list as such: test_list = [['w', 'e', 'f', 'a'], ['y', 't', 'h', 'n'], ['g', 'b', 'i', 'n'], ['m', 'n','m','m'], ['a', 'a', 'n', 'r'], ['y', 't', 'h', 'n'], ['w', 'a', 'r', 'n']] I want to remove the duplicate values at different levels. For example I want my result to be: test_list = [['w', 'e', 'f', 'a'], ['y', 't', 'h', 'n'], ['g', 'b', 'i', 'n'], ['a', 'a', 'n', 'r'], ['m', 'n','m','m'], ['w', 'a', 'r', 'n']] I thought of using for loops to remove the duplicates, but I'm not really sure how to do it. Please help. A: Use nested list comprehension: result = [[k for i in tl for k in i] for tl in test_list] More readable is: result = [[i for sub_tl in tl for i in sub_tl] for tl in test_list] Q: Does HTML templating require the server to download all template files? Suppose you have an HTML file containing a bunch of elements like: {{Title}} {{Text}} Obviously you don't want to load all those elements on every request. Therefore you can precompile these elements and store them on your server: Example.html {{Title}} {{Text}} $('img').attr("src", function (i, src) { return src

* **Draw tools**. These allow you to draw with pens, markers, or pastel on the screen. With brushes, you can draw in black and white or color. * **Erase tools**. These allow you to erase unwanted pixels by painting over them. You can erase pixels in a rectangle, a mask, or a path. * **Fill tools**. These tools fill an area with a color. There are numerous shades of gray, and you can also use the Hue/Saturation and other tools to create cool effects. * **Transform tools**. These allow you to skew, rotate, and scale the image around a central point. Sometimes, a specially chosen central point is just what you need to create a sketch or complicated shape. Of course, many of these tool features can be used together. For example, you can draw a colored rectangle with the Draw tool, then use the Brush tool to paste the rectangle onto another layer. * **Lasso tools**. These allow you to create a selection of just part of an image. This is useful for grabbing a section of the image without touching the rest of it. Those are the most commonly used tools. You can find more tools in the Edit menu, or by clicking a tool in the Tools panel of the Tools shelf. # Chapter 4. Choosing Colors All of the Mac's programs depend on the use of color to convey messages and draw attention. As an artist, you can use color to create moods, express a sense of humor, and bring life to your work. In this chapter, you'll learn to use the software tools for manipulating color. # Using the Quick Look Slider You can use the Color Picker to choose a color from a picture, or you can choose a color from a palette of colors. Either way, the Color Picker is easy to use, and it has a handy Quick Look option that can give you an instant preview of the color you select. For example, if you double-click the Quick Look Slider in the Color Picker (Figure 4-1), the Mac displays a preview of the color. It's easy to change the color to a different one just by dragging the slider to the left or right. To close the preview, press Return. You can adjust the Color Picker's settings using the Sliders Control's options menu, as shown in Figure 4
