* For more details about Photoshop, start with any of the books in the "Color" chapter. PDF (portable document format) PDF, or portable document format, is used for making documents and text available to different operating systems and for printing. Many basic image editing applications provide basic PDF features. Some include * Raster graphics * Vector graphics * Transparency PDF is typically used in simple graphic files. * It's used for simple text files (it can be searched as text) * It's used for scanned images and so on * It's used to create basic newsletters and other simple documents Easy to use GIMP is an easy way to open and edit PDF documents. Free from the complexities of Photoshop, GIMP has several advantages over Photoshop. First of all, you don't have to buy a copy of Photoshop to use it. Also, GIMP does not require specialized training or any skills in graphic arts. It uses raster graphics, so it can create both vector and bitmap images. GIMP can also work as a photo editor, creating images in JPEG, PNG, GIF, and TIFF formats, and as a web browser, opening Web files. GIMP does require an understanding of raster graphics. See the tutorials on the GIMP Home Page for more information. * Because it uses a layer-based editing system, you can place multiple graphics layers on top of each other. * It can open and edit PDFs. It is free and supports Windows, Mac, and Linux.

In this post I list the most helpful tips and tricks you need to know. Photoshop tricks/tips Create a rainbow filter Open a color image. Choose Filter > Desaturate. Start typing rainbow to filter the image, and Photoshop will give you options. Choose Rainbow and click OK. Add an text box Click the text tool, select the desired text. Press Shift $+I$ to activate the magic wand tool. Click inside the text and drag until the marquee starts moving. Press Enter. Use a color filter In Photoshop, you can use the color filter tool to select and fill a part of an image with a certain color. You can also edit the brightness and contrast of the colors. Select the gradation filter. Click the gradation filter on the toolbar. Drag a blue or green rectangle around the image. Type a number in the box next to the brightness and click OK. Click the black drop-down menu beside it and choose a hue. Select the spot healing brush Click the Spot Healing Brush tool, click the image, and drag over the problem area. Adjust the brush size Click the brush, and drag it to a size you'd like. Vignette Select the Pen tool and click inside the image. Press Shift to activate the Magic Wand tool. Click inside the vignette to select. Invert Hold Alt and click the Paint Bucket tool. Remove pixels Click the image. Press Ctrl + G. Create a rainbow filter Open a color image. Choose Filter > Create vignette > Outer glow. Make a photo bigger Click the image's arrow to the right of the zoom tool, and scroll until the image is bigger. Click outside the image to start applying the changes. Invert the colors Press Ctrl + I. Create a clean background Click the Magic Wand tool and press Ctrl + Shift + Alt + I. Select the Background layer and click OK. Select the corners Click the Magic Wand tool, and click inside the image. Start dragging until the rounded corners are selected. Create a b/w copy Click on the Edit > Copy menu. Create a new document, place it below the current image. Select the new document, and click Edit > Paste to copy the image. Q: Too many edits and undeletions Possible Duplicate: Too many "suggested edit" approvals What's up with all the edits and undeletions? Usually there's one or two a day, but this morning there were three in less than an hour. Looks like some corsair triple stampede in action. A: I'm the one who approved your first two and reverted the third, yes I did and I'm quite ashamed of it. I guess I can't change it now, as there's already a review going on to which you can object. Please accept my apology... Q: How to prove this inequality with $\$ \backslash \cos \$$ and $\$ \backslash \sin \$$ ? How to prove the following inequality? $\$ \$ \backslash \cos (n+1) \backslash p i \backslash l e \backslash f r a c\{\backslash p i\}\{2\} \backslash \operatorname{le} \backslash \cos (n \backslash p i)-\backslash f r a c\{1\}\{n\} \backslash l e ~ \backslash \cos (n \backslash p i) \backslash l e \backslash c o s(n+1) \backslash p i \$ \$ A:$ Since $\$ \backslash d f r a c\{1\}\{n\}-\backslash f r a c\{1\}\{n\} . \$ \$$ We have $\$ \$ \backslash \cos (n+1) \backslash p i \backslash l e q ~ \backslash \cos (n \backslash p i) \backslash l e q ~ \backslash c o s(\backslash p i-n \backslash p i)=$ $\backslash \cos (-n \backslash p i)=\backslash \cos (n \backslash p i), \$ \$$ where we used that $\$ \backslash \cos (\backslash$ theta $+2 k \backslash p i)=\backslash \cos \backslash$ theta for any $\$ k \backslash i n$ \mathbb $\{Z\} \$$. By we also have $\$ \$ \backslash \cos (n+1) \backslash p i=\backslash \cos ((n+1) \backslash p i-(n+1) \backslash p i)=\backslash \cos (n \backslash p i) \backslash \cos (\backslash p i-1)+$ $\backslash \sin (n \backslash p i) \backslash \sin (\backslash p i-1) \$ \$$ and $\$ \$ \backslash f r a c\{\backslash p i\}\{2\}=\backslash f r a c\{\backslash p i\}\{2\} \backslash \cos (\backslash p i-1)+\backslash f r a c\{\backslash \sin (\backslash p i-1)\}\{n\}$ to \frac\{\pi\}\{2\}\$\$ so it is

Q: Help me to find a polynomial whose roots are $\$ 6,2, \backslash$ sqrt $3 \$$. The question is to find the polynomial whose roots are $\$ 6,2, \backslash$ sqrt $3 \$$ where $\$ \backslash$ sqrt3\$ is the square root. I tried to solve this problem by using Vietas formula to find the roots. $\$ \$ \backslash$ sqrt $3=a+b$ $\operatorname{sqrt}\{3\} \$ \$$ The only quadratic polynomial I can find using Vietas formula is $\$ a^{\wedge} 2+b^{\wedge} 2=-1 \$$ which is simply by playing around with $\$ a^{\wedge} 2+b^{\wedge} 2 \$$. How do I find a polynomial with integer coefficients? Please help A: You can use Rational Root Theorem to rule out some integer polynomials: $\$ \$ a+b \backslash s q r t 3=0$ \quad \land \quad $a^{\wedge} 2+b^{\wedge} 2=-6 \$ \$$ This give us the solutions $\$ a=-\backslash$ sqrt $3 \$$ and $\$ b=-2 \$$ So, by Vietas formula we have $\$ 6=-\backslash$ sqrt $3-2$ \sqrt $\{3\}=-\backslash$ frac $\{2\}\{\backslash$ sqrt 3$\}=-\backslash f r a c\{2\}\{\backslash$ sqrt[3] 3\}\$ and this is our required polynomial Alternatively, since you are given $\$ \backslash$ sqrt $3 \$$, use Vietas formulas to find out the coefficients of the polynomial. EDIT R. See the comments below. This way is more direct. A: You can use Vieta's formulas. The first root is \$a\$ and is given by \$\sqrt[3]\{6\}-\sqrt[3]\{2\}=\sqrt\{3\}\$. For the second root you use Vieta's formulas again to get that $\$ a^{\wedge} 2+b^{\wedge} 2=4 \$$. Hence you get a polynomial with integer coefficients of degree 2 with roots $\$ a \$$ and $\$-\backslash f r a c\{1\}\{a\} \$: \$ \$ P(x)=a^{\wedge} 2(1-x)-a\left(1+a^{\wedge} 2\right)=-a-a^{\wedge} 3 \$ \$ A$ : Every integer $\$ a \$$ such that $\$ a^{\wedge} 3=6 \$$ corresponds to a root of a polynomial of the form $\$ \$ f(x)=\backslash$ sum_\{
