And yesterday I was upgrading the flahs on our foti-r light house I had installed flashplayer for IE but it didn't work and so I tried to use Google Chrome. The upgrade process froze and I was asked to restart so I did, but nothing happened. My computer restarted and was back to the desktop. But when I tried to log on to my email I was asked for my password and when I entered it it wouldn't let me log on. This was when I restarted my computer again and this time it was different, it wouldn't log on. It just sat on the purple screen with the cursor flashing at the top left. My machine seemed to be trying to reboot but it never did. So I hit the power button to turn it off and when I turned it back on I got the same purple screen. Clicking the F10 key brought up this error message"Starting windows report-server service. The RPC Server is unavailable. The RPC Server is unavailable. The RPC Server is unavailable. The RPC Server is unavailable. The RPC Server is unavailable." If I click Ok it comes up a blank screen and the mouse doesn't move. Then I click the F10 key and it brings up another error message"The RPC Server is unavailable. The RPC Server is unavailable. The RPC Server is unavailable. The RPC Server is unavailable. The RPC Server is unavailable. The RPC Server is unavailable. The RPC Server is unavailable. The RPC Server is unavailable. The RPC Server is unavailable." Help please! First I got a "Warn[]" message on line: if (model.Categories.Any(x => x.Id == category.Id)) { viewModel.Categories.Add(category); It seems like the binding of my model.Categories is somehow changed by the second foreach. Here is the non-working code IList oldCats = model.Categories.Where(x => x.Id == category.Id); if (oldCats.Count!= 0) { viewModel.Categories.AddRange(oldCats); } I also have a "Model item passed into the dictionary is of type" problem as well if (oldCats.Count!= 0) { viewModel.Categories.AddRange(oldCats); return RedirectToAction("Details", new { id = viewModel.Id }); } I am wondering where I need to change my binding, or if I am using that my loop correctly. If I loop the oldCats there are no problems and I could bind it to my view. Hope someone can help me with this A: This binding is alright, it is not problematic. The only issue is that your code in the if statement above is executed too fast and you could have 2 categories with id equals 2 and this would be unexpected. Consider this alternate code: CategoryModel newCategory = null;
