Ask HN: How to get started in iOS Dev? - mkopane Hello,I'm a high school student and I have an iOS dev position at a company that I'm about to work. I'm looking to get a beginners book on iOS development, but finding it a little difficult.I know iOS9 looks really cool but I'd like to get started with a good book that I can self-study. A book with videos, a book for beginners, and a book for intermediate would work well. ===== wc- Working through the App Store chapters in Objective-C Programming is probably the closest thing you'll get to a 'beginner' book. Since you're in high school, you're probably more interested in the Cocoa API than Objective-C, so start with the Cocoa documentation or, better yet, the core framework documentation. Q: Is it possible to install a specific version of a gem with Gem::install? I am using Ruby 1.9.3 on OSX. I would like to install the 1.8.23 version of the following gem: gem 'thin', :git => 'git://github.com/ruby/thin.git' The version of Ruby that Thin expects is obviously not the version of Ruby that I have installed. Does anybody know a good way of making this work? A: I ended up going with the following: gem 'thin', :git => 'git://github.com/ruby/thin.git' gem '1.8.23', :require => 'thin', :group => [:development, :test, :production] The reason that it didn't work is because the version of the gem that I was installing wasn't compiled to use the correct version of Ruby. \$\$-automorphism of \$A\$ such that \$R
