Introduction and History Photoshop was first released for Macintosh computers in 1987 and was developed as a research project by Thomas Knoll, Robert W. Kim and James Clark, at the University of Michigan. A large part of the development was done by Richard S. Rogers and Mario Cabral. Similar to the way some of the tools work on Photoshop for iPad, an Apple Newton or a WebOS device, the goal was to create a desktop version that could emulate the functionality and ease of use of graphics software on a computer monitor. Another goal was to create a system that was as intuitive as possible. In early 1992, Adobe attempted to register Photoshop as a trademark. However, the registration attempt was challenged by the Mac user group, The Mac User Group, because they felt that the trademark was too similar to the name of the Apple SuperMac. In the end, an agreement was reached between the groups and a settlement was made that Photoshop was a common noun, unlike the Apple SuperMac trademark which was used only as a verb.

Adobe also registered the trademark for Photoshop logo. The logo does not infringe upon any trademarks. The first version of Photoshop was released in March 1988, and the last version was Photoshop CS6, released in December 2014. Highlights Image Editor: It does color manipulation, edge detection, vector drawing and perspective remapping. This is for Mac users. Photoshop also has its Smart Brushes. These are brushes that have automatic settings. This is perfect for graphic design. Image Editor: Photoshop has many important tools in this category for editing images. This is for Mac users. Saving: This is an import feature that allows you to save any open image. Image Enhancement: It supports layers, image adjustment layers and the ability to blend and combine the image with another image. Image Enhancement: It supports layers, image adjustment layers and the ability to blend and combine the image with another image. Features Perhaps the most important feature of Photoshop is the ability to alter and retouch your photos. Most basic features in Photoshop are free to use, but many advanced features cost extra. All of the main features are covered in this chapter. > Photoshop Elements: An Introduction > Choosing a Photoshop Version Adobe Photoshop Adobe Photoshop is a professional digital image editing application. While it is primarily intended for use by artists, designers, photographers, and graphic and web designers, it also includes the general and design-related features found in most photo editing software. This version is designed to edit photographs, but it also works as a digital collage or mosaic maker. Because of the price and complexities, it is not intended to be used by web designers or programmers. Adobe Photoshop Elements Adobe Photoshop Elements is a freeware version

of Adobe Photoshop. It is designed to be an easier to use software for photos. Photoshop Elements has a lot of features at a basic level. Q: Help proving that $\sin^2x = \frac{1 - \cos 2x}{2}$? As a part of a larger question, I needed to prove that $\sin^2x = \frac{1 - \cos 2x}{2}$. My approach was to: Factor $\sin 2x$ and write it as \sin^2x . Note that $(1 - \cos 2x) = \sin^2x - \cos^2x = 2\sin^2x$. Then, I was stuck, as I didn't know how to factor. Any other ways to prove that the equality is true? A: As @DavidMitchell indicated, you can use $\sin 2x = 2\sin x \cos x$. The idea is to make use of the fact that $\sin^2x + \cos^2x = 1$. A: You can use the fact that $\sin^2x + \cos^2x = 1 \quad \Longrightarrow \quad \sin^2x + \cos^2x - 1 = 0 \quad \Longrightarrow \quad \sin^2x - \cos^2x = 1 - 1 = 0$. A: $\sin x = \cos \frac{x}{2}$ and $\cos x = 2\sin^2 \frac{x}{2} - 1$. Plugging those into $\sin^2x = \frac{1 - \cos 2x}{2}$ and $\cos^2x = \frac{1 + \cos 2x}{2}$ produces $0 = 2\sin^2 \frac{x}{2} - 1 - 2\sin^2 \frac{x}{2} + \frac{1 - \cos 2x}{2}$. Q: Prepopulate UIDatepicker on iPhone simulator There are many questions and answers on how to do this, but all of them are not working for me. I am trying to set some of the properties of a UIDatePicker in my view controller. I would like to have it prepopulated with an NSDate when the app runs in a Simulator. I currently have a DatePicker setup and it seems

Brave words from a brave woman who may have gone too far before it all blew up in the media... Lady Gaga has called "homophobia" a "sin" and said she was on a mission "to educate the world" about gay rights. The artist, who has said her sexuality is "fluid", made the comments at a concert in Pary, France, to a crowd which included prominent gay figures. "I love all f**ts, I love all queers," she said. "I think homophobia is sin." And she added: "[This] is my journey, to educate the world." The comments were echoed by actress Salma Hayek, who said: "We're not born gay. And it hurts me so much to see those people be treated with such fear and be so hurt." The singer's comments come after she had more than 30,000 children take part in her Born This Way Foundation campaign. She launched the project to educate young people about gay rights and shunned the "size zero" label she used during her Monster Ball tour. I've tried LOAD CSV WITH HEADERS FROM "file:///D:/path/to/file.csv" AS row RETURN row.kategory, row.value; But I got the error org.neo4j.cypher.NeoCypherException: Symbol "value" is not declared. Declare the symbol before use. Is it possible to import into Neo4j at all, and how would I do it? A: You need to specify the attribute of the graph to import the CSV file. Like this: LOAD CSV WITH HEADERS FROM "file:///D:/path/to/file.csv" AS row MATCH (n:Category{name:row.kategory})-[r:Value]->(n2:Category) WITH row.kategory,
