That being said, if you find yourself using Photoshop frequently, you can also make your life easier and your work more efficient by learning to use some of the basic tools and features from the beginning. 7. **Choose the area of your photograph to work on**. Select an area of your picture to manipulate. If you want to move an object in the foreground to highlight something in the background, your selections can be made in either order. As you work, press to accept or reject a move. You may find that turning off an object or adjusting a setting can help you better figure out how to make the object or effect you want. 8. **Use the selection tools to select what you want**. To help you get started, you can choose from a range of tools, including the Move tool, the Direct Selection tool, and the Marquee tool, as shown in Figure 1-1. The Move tool is your workhorse in Photoshop: It enables you to drag around the image to select different areas, or you can directly edit the pixels on the current selection or on the canvas. The Direct Selection tool allows you to quickly select blocks of pixels. The Marquee tool is similar to the Direct Selection tool, but can be used to make very large selections, as shown in Figure 1-2. Figure 1-3 shows the Selection Options bar and how you can change the selection tools' settings. Photoshop has several different ways of selecting the objects in your image. With the Move tool, you can select the area you want to move, as shown in Figure 1-4. To create a rectangular selection around an object, hold the Shift key while dragging. Click to select the area as soon as the cursor touches it. To create a small area such as a square, hold down the key as you drag to define the square. **Figure 1-2:** The Marquee tool enables you to make a selection that's larger than any other. **Figure 1-3:** Click the Options button on the Selection Tools panel and make adjustments to how the selection tool works. **Figure 1-4:** To select an area, use the Move tool to drag over the area of your photo you want to select. It's important to remember to select the layer you want to work on with the Move tool. If you forget, it can be a real pain to move and redo your changes. Select a different layer by pressing

Q: Cross-browser calc() function The calc() function in CSS3 is very powerful. It allows you to do a lot of interesting things like currency. The problem is that many browsers (like IE8) don't understand it. Is there a cross-browser, standards-compliant calc() function? The only thing I can think of is to parse the input string into three sub-strings and perform the math on each, but I'd rather find a better way. So far: IE7/8 and some older FF versions don't have a calc() function. So far, I'm assuming that's the best we can do. Modern versions of IE (up to IE9) and some other browsers don't understand calc() at all. So far, I'm assuming that's the best we can do. I've noticed that IE6-8 will do some simple math, like area in percentages, like calc(50% - 5px); and calc(10% - 3px);, but what I'm looking for is calc(100 - 40px); A: I have come across this question and answer on Stack Overflow. Spanish publication Diario Gol have linked Matic with the Catalan club as Guardiola attempts to complete a major transfer coup as he looks to add quality players to his squad to add further competition to Barcelona's established playing group. Both Matic and Valdes are set to move to the Catalan club, who could announce a deal for the Chilean in the next few days, after the World Cup. Guardiola has also been linked with moves for Manchester United's Juan Mata and Liverpool's Alberto Moreno and has already agreed to bring Cesc Fabregas from Chelsea. Matic and Valdes are highly regarded by Guardiola and both have been key members of the club's successful team. Matic, who has been captain of the national team, has an estimated price tag of £30million. Mid-term Outcomes of Transapical Aortic Valve Implantation With Transaortic Tethering Technique.
