1. Version History When you use Photoshop, you will usually have a large collection of image files in your computer to work on. All those files go through some form of versioning, either in the image itself or in the project file. In the image, each version is named by its date, and also has an incremental number associated with it. The first file you make usually gets a default name like "filename1.psd." However, you can use the "Date Modified" option under File → Properties to set the date or time the image was edited. As you work on your image files, you'll have multiple versions that have been modified and saved. The version control keeps track of the history and at any point in time, can be found in your version history. Each version is very similar to the original and can be easily identified by its date stamp. Although you can create a new document as often as you like, the only time you can really lose a version is when you move or delete the original file, and this is easy to avoid by simply saving your image files as projects. 2. Photoshop Structure Photoshop is organized as a layered file, which means that each layer in the file is essentially an image on its own. This is very important to understand because layers are the basic building block for almost any image. Layers are like individual color filters that you can apply to each color in the image; for example, you can create a layer mask on a single color that completely obscures it from the final image, or create a layer mask that's only partially transparent, so that only a portion of the color remains visible. If you have learned how to use GIMP, you will find the Photoshop structure similar to that of layers in GIMP. For the purposes of this tutorial, we'll look at a single image, such as an image to post online or distribute to friends and family. A project file is where you save an image or a series of images to be edited. To help us track the structure, we'll use a file called test.psd. This will be used to show our development stages and the various layers that make up each stage of our image. We'll also use the name test.psd because it is very easy to remember. 3. Photoshop Layers Each image in Photoshop has one or more layers. Layers are akin to different-colored windows

Q: Intuition behind integration by parts I feel that intuitively i can understand what is the procedure to do the integration by parts. Say i have a function $f(x)$ and i want to integrate it in a region of a curve γ. It is given that i have defined a function $$\phi(x,y)=f(x)(x-y)+C$$ With the boundary conditions $\frac{\partial \phi}{\partial n}(x,y)=0$, $\phi(x,y)=\frac{y^2}{2}+C$ for some C. I want to integrate ϕ over the curve. In order to do this i need to decompose the curve as a difference of its tangent vectors, thus: $$\phi(x,y)=\phi(x_0,y)=\phi(x_1,y)-\phi(x_2,y)+\phi(x_1,y)$$ For some point (x_0,y) and the condition $\phi(x_0,y)=\frac{y^2}{2}+C$ i can do the following: $$0=\frac{\partial \phi}{\partial n}(x_0,y)=(f(x_0)-f'(x_0)(x_0-y))+(f(x_2)-f'(x_2)(x_2-y))+f(x_1)-f'(x_1)(x_1-y)$$ In order to solve for (x_1,x_2) i need to solve the following system: $$\begin{cases}f(x_2)-f'(x_2)(x_2-y)=0 \\ f(x_1)-f'(x_1)(x_1-y)=0\end{cases}$$ which is a system of linear equations with a determinant which is not zero. If the determinant is zero, the system is ill-posed and we have no solution, thus the question i want to ask is: Is there an explanation to why the determinant can be zero when having two solutions for the system of linear equations? A: If $\det A=0$,

From what we've been able to gather, the procedure would be similar to what's already used for natural cataract surgeries. Dr. Jonathan Tackett, a doctor at Charleston Cataract & LASIK, who was not involved with the study, says the procedure would be easier for those who suffer from microcornea syndrome. Tackett says that with a transplant of tissue, "you're able to connect the dots visually that you never could before." The new study adds that the surgery will be used as a preventative measure. The researchers found that in 41 percent of the patients who underwent the surgery, their eyesight was improved.Q: Failing to create a working schema in Django 1.7 I am very new to Django and I am trying to work with schemas. I have followed the documentation, but when I try to create a schema and run manage.py schemamigration whatever then run python manage.py migrate I get the following error: Traceback (most recent call last): File "manage.py", line 10, in execute_from_command_line(sys.argv) File "/usr/lib/python2.7/dist-packages/django/core/management/__init__.py", line 338, in execute_from_command_line utility.execute() File "/usr/lib/python2.7/dist-packages/django/core/management/__init__.py", line 330, in execute self.fetch_command(subcommand).run_from_argv(self.argv) File "/usr/lib/python2.7/dist-packages/django/core/management/base.py", line 390, in run_from_argv self.execute(*args, **options.__dict__) File "/usr/lib/python2.7/dist-packages/django/core/management/base.py", line 444, in execute output = self.handle(*args, **options) File "/usr/lib/python2.7/dist-packages/django/core/management/commands/migrate.py", line 178, in handle
