Edit : A picture in need of an edit. Several layers can be edited independently of one another. A time-saving method for creating images, Photoshop layers give you the flexibility to make changes to any part of an image simultaneously by simply moving the layers to a different position in the layers palette. Layers are logically organized, allowing an image to be edited much more efficiently than doing so with raster images. You can create a single layer that covers the entire surface of an image. **_Layering_** : Using multiple layers, you can add or remove things from the image. When you click and drag on an area, it shows the contents of all the layers beneath it. Photoshop layers are like layers in a multi-layered cake: Each layer is like a shell that holds the cake inside. When you add layers to an image, you can hide, display, move, or resize the layers and their contents. **_Image editing_** : Image editing includes file optimization, image enhancement, and retouching. Photoshop can be used for file optimization (improving the appearance of an image's file size) or image enhancement (improving the image's appearance). Retouching (editing an image by removing unwanted areas) is the process of recreating an image in a photograph, painting, or drawing. If you resize an image, it's an image editing action. Resize an image in Photoshop and a graphic design tool, such as Illustrator, will resample the pixels automatically. **_Resize_** : Making a picture bigger or smaller. Photoshop has an easy to use resize tool. Simply click the cursor on the desired area of the image, and drag the outline box to a new size. Click and drag the resize handles to change the size of the image.

[The competence-centers of the hospitals--an alternative for care for old and frail care?]. The aging of the population and the subsequent rise in the number of people in need of long-term care has led to an intensification of the cooperation among the various care providers. The competence center model has been proposed as a way of sharing the responsibility for the care of the old and frail elderly, integrating the care for this group of people. This model comprises three elements: the evaluation of the needs and deficits of the person, the planning and realization of an adequate care, and care education./* * FreeRTOS Kernel V10.1.0 * Copyright (C) 2018 Amazon.com, Inc. or its affiliates.
