Field of the Invention This invention relates to the field of genetic testing. More particularly, this invention relates to methods and devices for performing genetic testing on a sample collected through the use of a biopsy, a swab and/or a lavage. 2. Description of the Related Art DNA-based methods of genetic testing are now routinely used for diagnosis in the fields of clinical genetics, molecular biology, and medical research. For example, in the clinical and diagnostic area, new methods of DNA-based genetic testing are being developed, including genetic testing of cells that have been collected from a patient (e.g., cells that have been obtained via a biopsy or other invasive procedure). Such cell collection methods allow testing of genes in cells that are more likely to be the cause of a patient's disease, but it is still difficult for a clinician or researcher to collect sufficient cells of sufficient quality from a patient's skin or other tissue to be diagnostic. For this reason, methods have been developed that allow a clinician or researcher to collect nucleic acids from a sample of bodily fluid (e.g., saliva, urine, and blood). For example, PCT Patent Application No. PCT/US98/12614, which is incorporated herein by reference, describes methods and devices for isolating nucleic acids from a sample of bodily fluid. Methods of collecting bodily fluid samples are often uncomfortable or invasive. However, the discomfort or invasiveness of collection is often a secondary concern to a clinician or researcher. Accordingly, there is a need in the art for methods and devices that facilitate the collection of a bodily fluid sample. There is a further need for methods and devices that also facilitate DNA-based genetic testing on the bodily fluid sample. In one aspect, this invention provides a method of performing DNA-based genetic testing on a sample of bodily fluid. The method includes the step of using a collecting device to contact a skin surface with the bodily fluid to release skin cells into the bodily fluid. The method further includes
