Q: How to check if a string contains n characters I'm working on an assignment where I have to find if a string contains 3 English alphabets (a, b, c) or 4 English alphabets (a, b, c, d). What would be the best way to do this? Here is my code so far: `var contains(String haystack, int needleLength) { haystack.isEmpty() needleLength == 0 haystack == needleLength haystack.indexOf(needle) == -1 }` A: The regex way `^\w{3,4}$` This regex accepts 4 or 3 letters. For 3 letters it accepts only: a, b, c for 4 letters it accepts: a, b, c, d explanation `^` = begin of string `\w` = `[a-zA-Z0-9_]` = just letters a-zA-Z {3,4} = 3 to 4 repetitions of the expression above `$` = end of string Using this Regex you can check if the string contains three or four english alphabets: `isSubstringOf("abc", "abc") // => true isSubstringOf("abc", "abcd") // => false isSubstringOf("abc", "axc") // => false` A: You could use `indexOf`, and test based on the index: `var contains(String haystack, int needleLength) { haystack.isEmpty() needleLength == 0 haystack == needleLength let needleIndex = haystack.indexOf(needle) return needleIndex == haystack.length - needleLength || haystack.substring(needleIndex, haystack.length - needleLength) == needle // or just: let needleIndex = haystack.indexOf(needle) let needleLength = needle.length return needleIndex == haystack.length || haystack.substring(needleIndex, haystack.length - needleLength) == needle }` Edit: As @K
