in New York and is represented in Toronto by the firm of Haydel Law Firm. The facts in this case are undisputed. Apart from the question of its reading of the contract between the parties, the arbitrator's decision in this matter is supported by the law of Ontario. Accordingly, the decision of the arbitrator is affirmed. At the time of the decision in this case, the plaintiff was an employee of the defendant through the defendant's sole proprietorship, Ideal Distribution

Corporation Limited (Ideal). Plaintiff was a box packer employed by Ideal. In a job action taken by the defendant, plaintiff lost his position as a box packer but was transferred to a packing position in another department. The transfer was made pursuant to an agreement made by Ideal with the defendant, whereby Ideal would pay the defendant a monthly salary for the work performed by the plaintiff by the defendant. The agreement states that it is in consideration of the transfer of the services and work from Ideal to the defendant, provided that the plaintiff will not voluntarily quit or terminate his employment as a result of such transfer. As the plaintiff was not satisfied with the packing position he was given, he

refused to continue working, and the defendant then terminated his employment. Under the collective agreement between the parties, the defendant was obligated to pay the plaintiff his regular hourly rate for all hours worked by him in the role of box packer. It had never paid the plaintiff for hours worked in other roles in the box packing department, nor was it paying the plaintiff for any hours worked in the packing role after he was transferred by the defendant to the other department.

The arbitrator found that the employment agreement between the parties gave rise to a contractual obligation on the part of the defendant to pay the plaintiff for all his hours worked in his role as a box packer. The arbitrator

concluded that the defendant owed the plaintiff "a wage for his services during the period of his transfer to the packing department". Therefore, the arbitrator ordered the defendant to pay the plaintiff \$2,965.50 (representing unpaid wages for all his hours worked in the packing role). The arbitrator held that the defendant was not allowed to rely on the language of the agreement in paragraph 2 which stated that "the employee shall not voluntarily quit or terminate his employment as a result of such transfer" because, in the arbitrator's view, a reasonable interpretation of the language of the agreement was that the term "employment" as

Is there an easy way to do this? A: A good way to do this is to use the findstr command, which searches strings in files. We can use it to find.rar files whose name contains "Meadow". findstr {Meadow}.rar The brackets are used to

group the wildcard characters, which are '*' (for any number of any characters), '?' (for any one character) and '*?' (for any single character). On Linux you can use the -r switch, which makes the search recursive. This will search all sub-directories recursively as well. Another way to do this is to use the find command, which allows wildcards. find. -iname '*.rar' Again, you can include -r (recursive), -maxdepth (limit the depth of the search) and -iname (allow subdirectories to be searched) A more sophisticated way to do this would be to use grep and regular expressions. find. -type f -regextype egrep -regex '.*(.rar|.ZIP)' The regular expression will match any character. However, it will only search those files which contain.rar

and.zip endings. You can use this to search for any thing which has.rar and.zip endings. # If you want to ignore files with.rar or.zip endings find. -type f -regextype egrep -regex '.*(.rar|.zip)' -delete When you use find you should use the -delete option to delete files that you do not want to keep. Grep will be the most efficient way to do this, but may generate more output. A: The following seems to be as efficient as any of the other methods, but it is more general: find. \(-iname "*.rar" -o -iname "*.zip" \) -exec rm {} \; The parentheses here enclose the find command in an single subshell; the backslash before the closing brace, in turn, expands out to the whole of the find command. The {} will store the single matching file(s) that will

be passed as arguments to the rm command. Note that the rm command will need to be provided with the -i (inconsistent ignore value) flag
