the game shares many similarities with other hacker simulators. the whole gameplay takes place on the main heros computer desktop. you hack servers, take money from the banks, upgrade your hardware and software. in contrast to the previous hacker evolution games, duality is a much more accessible entry, even though it is still a niche game with a steep learning curve. servers in the game have two primary stats: firewall and integrity. lowering first one lets you access files or take the money from it. if the servers integrity drops, it gets destroyed. to do so, you can use several hackers weapons, such as a dos attack or emp attack. besides the usual servers, there are some ai controlled, that can attack you back. the game is very fast-paced. every minute of the game costs you some amount of money. such mechanic makes time-management and quick decision-making an integral part of improving in the game. hacker evolution duality also offers a multiplayer with different modes where compete against both other players and hostile ai servers. i have been playing this game since it was released on the pc last week, and i've noticed that the game has been dramatically improved. the graphics have been greatly improved, and the gameplay has been improved. it's a very addictive game and has some great levels and some that are just plain silly. i highly recommend this game if you are looking for a hacker game. some of the skills in hacker evolution: duality require you to do a certain action. you can do it manually, like injecting a key, or automatically, like infecting a system. each skill has its own level. to proceed further, you have to reach a certain level in that skill. in this game, you are offered to complete the activities you need to complete, and you are given a number of days to do that.
